PROFILE

Full-stack developer focused on front-end and data visualization, with 2+ years building production software at Universidad de los Andes and Verivolt, plus data research with Cornell University. I build products end-to-end, from data models and backend services to interactive React and Angular interfaces, and I do my best work where a product's visual and analytical layer is central.

SKILLS

Frontend & Data Viz	Angular, React, TypeScript, JavaScript, D3, Power BI, Tableau
Backend & Data	Python, Java, SQL, Flask, FastAPI, PostgreSQL
Infrastructure & QA	Docker, AWS, Git

EXPERIENCE

Jan. 2026 – Jun. 2026	Universidad de los Andes - Graduate Assistant (Digital Transformation Vice Rectorate) - Automated 3 institutional document-management processes: SharePoint migration, duplicate-document detection, and OnBase-to-NAS document transfer - Performed QA for each of these automations and for 2 other teams' projects, including functional validation and integration testing to catch defects before production
Jul. 2024 – Dec. 2025	Universidad de los Andes - Research Assistant → Graduate Assistant (<i>No Estás Solx</i>) - Developed and maintained full-stack features for <i>No Estás Solx</i>, the university's support platform serving 56,000+ students, using React and FastAPI - Rebuilt the existing CAPP service from the ground up, redesigning its data model, core algorithm, and visualizations to replace a slow, hard-to-use legacy version, and took it to a pilot with engineering faculty - Optimized data flow and backend services, reducing load time from 90s to 179ms
May 2024 – Sep. 2025	Verivolt - Full-Stack Developer - Led frontend development as one of four software engineers for process-automation tools used by hardware operations teams - Rebuilt a legacy burn-in tool into a new burn-in testing system, redesigning its interface and integrating it with backend services via REST APIs - Built the frontend for assembly testing, calibration, and validation from scratch, turning manual steps into a single tool - Built Power BI dashboards for the sales team, using Python to clean and analyze sales data and surface trends that informed targeting decisions
Jun. 2024 – Aug. 2024	Cornell University - Data Analyst - Cleaned and analyzed CDC PRAMS survey data on maternal mental health (45,000+ respondents across 46 U.S. states) - Applied logistic regression and built visualizations that informed research findings
Aug. 2022 – Jun. 2024	Universidad de los Andes - Teaching Assistant Supported <i>Languages and Machines</i> course for 4 semesters, assisting 40+ students per semester with problem-solving, grading, and academic follow-up

EDUCATION

2025 – 2026	Universidad de los Andes - Colombia M.Sc. in Systems and Computer Engineering (Grad: Oct 2026)
2020 – 2025	Universidad de los Andes - Colombia B.Sc. in Systems and Computer Engineering
